CYBER RESILIENCE · EXTERNAL ATTACK SURFACE

# Pennsylvania

How exposed are the state's critical access hospitals from the outside?

**71.4%** of 7 assessed hospital domains sit in an elevated risk band (Critical or High)

National: 78.3% · mean score 68.7 vs 68.5 national (+0.2)

**7**
hospital domains assessed in Pennsylvania

**8**
critical access hospitals located in the state

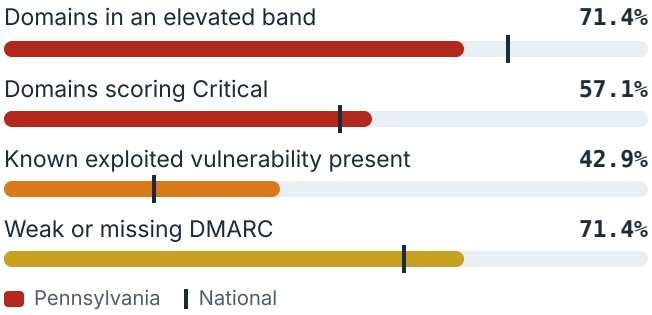

**68.7**
mean score · High band (0–100)

**34th**
most exposed of 42 reported states, by share elevated

**Small sample.** Pennsylvania has 7 assessed domains. At this size one hospital moves each percentage by 14 points, so read these figures as indicative rather than as a ranking.

## Pennsylvania against the national picture

Bars are Pennsylvania; the black tick is the national figure across 977 domains.

## How the 7 domains are distributed

Each domain is scored on its worst internet-facing machine.

| DOMAINS WITH A FINDING IN | PA | US | DIFF |
|---|---|---|---|
| Vulnerabilities | 57% | 53% | +5 pts |
| Email authentication | 86% | 77% | +9 pts |
| Exposed services | 57% | 66% | -8 pts |
| Web application and DNS | 86% | 88% | -2 pts |

THREE FIXES THAT MOVE THE NEEDLE

**01**
### Enforce email authentication
Publish DMARC, read its reports, then move to p=reject. A DNS change: no purchase, no downtime. 71% of Pennsylvania domains are weak or missing here.

**02**
### Close admin and database doors
Remote Desktop, SSH and database ports should not answer the internet. Put them behind a VPN or turn them off.

**03**
### Retire forgotten records
Remove DNS records that point at services you no longer run, and patch or replace outdated web libraries.

**How this was measured.** Passive observation of what each hospital publishes to the internet: DNS, certificates, open ports and public web pages. Nothing was logged into or exploited. Vulnerabilities are checked against the CISA Known Exploited Vulnerabilities catalog and FIRST EPSS, current to 2026-09-08; part of the scan data is older, so read the figures as a floor. Domain counts are not hospital counts: one health-system domain can carry several hospitals. No hospital is named; figures are aggregate only.

**SureShield** with BorderHawk.
Check any critical access hospital's band, or test your email security for free, on the SureShield critical access hospital site.
